

ID-CAM Photo Identification System

The ID-104 Identification System is designed to focus on quality, accuracy and ease of use. So you can expect consistently professional results from your in-house ID program. The LCD panel guides you through each step of the picture-taking process. The camera will not operate further until each step has been completed, eliminating the possibility of error. It takes 1, 2, or 4 identical photos on the same piece of Film.

Features:

- Takes 1, 2, or 4 identical photos on Polaroid Type color Film
- LCD display guides you through functions
- Aiming light ensures your subject's face is focused and in the correct place for the photo
- Lets you adjust the strobe to all lighting conditions and select different photo combinations
- Automatic shut-off feature
- Camera design allows for easy replacement of parts
- Optional battery pack and charger allows for approximately 400 mobile pictures. The battery recharges overnight.
- Operates from one of two 12V DC power supplies: Either a 100-125 VAC wall mount for domestic use or a 100-250 VAC auto switching desktop power supply.
- Available with or without the stand and can also be used with any standard tripod
- Approved by and conforms to: UL Standard 1950, CSA 950-96, CE Marking
